

Legionella Training

Legionella Advanced Level Course Details

Course Outline

Awareness of Legionella and the potentially deadly effects of Legionnaires' disease has grown rapidly in recent years. With several major outbreaks and high profile prosecutions under the Health & Safety at Work Act it's now more important than ever that organisations and individuals understand their legal duties and the serious consequences of a failure to comply with the law.

This advanced Legionella training course has been developed as an in-depth workshop based programme focused on the issues that surround Legionella and Legionnaires' disease, the practical management and treatment of water systems, health and safety data management, an in-depth examination of current UK legislation, good practice procedures and a review of recent outbreaks. The course completes with a test of competence and discussion forum.

Who Should Attend?

This course will be of most benefit to water treatment professionals and experienced technical, engineering and maintenance staff who have been involved in the management of water services for several years, and wish to increase their competence levels in this specialist area.

Certification

Course delegates will receive a Legionella Control "*Advanced Certificate of Competence*" Level 3, following the successful completion of the course.

Course Duration

Intensive two day course.
